

Abra2BST

Product Road Map

This Abra2BST Product Road Map is to inform our valued Abra2BST customers what the current state of development for Abra2BST is.

We are continuing work on the **General Ledger Module** for BST Enterprise. The current development path will be as follows:

- **Version 2.0** will include the BST General Ledger Module, amongst other enhancements. This version will remain in the current development platform and will create a GL export file. We were successful in creating a GL export file, which was already validated by BST. The projected release date is second quarter 2011. All customers current on their maintenance will get version 2.0 and pricing for the GL module has not yet been established.
- **Version 3.0** will include all of the features of Version 2.0 and will be able to be used with Sage Abra 10 (SQL) version. The projected release date is third quarter 2011.
- **Version 4.0** will include a full re-write of the application and will be developed in the .NET Framework. This version will include all the features of Versions 2.0 and 3.0 and will work with both the FoxPro and SQL database versions of Sage Abra Payroll. The release date has not yet been established.

All timetables are subject to change without notice and pricing for these modules have not yet been established.
